EDUCATION

Cornell University

Bachelor of Science in Computer Science, Business minor for Engineers

Ithaca, NY

Aug. 2023 – May 2027

EXPERIENCE

Research and Development Analyst

September 2025 – Present

Cornell Debut, Project Team

Ithaca, NY

- Training task specific DeepLabCut CNN to localize eye pupil borders, achieving $R^2 = .84$ vs. manual annotations
- Deriving time-series bio-markers (velocity, radius, acceleration) for ADHD diagnosis and building **logistic-regression classifier** with MLE

Undergraduate Researcher

February 2025 – Present

Artificial Intelligence and Robotics Lab (AIRLAB), Cornell Tech

Ithaca, NY

- Implementing and benchmarking common **Multi-Agent reinforcement learning** baselines across simulated collaboration tasks; comparing sample efficiency and stability under identical seeds
- Developing reproducible evaluation scripts and simulations for hypothesis evaluation

Software Engineer Intern

June 2025 – August 2025

VegaMX

New York, NY

- Implemented a distributed Spearman-correlation pipeline for geospatial time-series (**20 years × 1-km grid, 20 layers**) using Python, Dask, and xarray, computing **6.3B** pairwise correlations in **under 10 minutes**
- identified, sourced, and normalized **20 geospatial layers** into a multi-year GeoJSON dataset; added metadata to improve reproducibility and future feature selection
- Identified key pre-ignition wildfire risk factors by analyzing correlations and feature importances, informing model feature selection and data-collection priorities

PROJECTS

Reel Notes | *Typescript, Python, OpenAI API, Claude API, Fast API, React Native*

Nov. 2025 – Nov. 2025

- Built a **React Native** app that turns Reels/TikToks/Shorts into a searchable notes library, transcribing speech and generating notes that summarize key takeaways
- Integrated **OpenAI API + Claude API** to generate clean, consistent notes and deliver them in-app
- Shipped and demoed an end-to-end MVP in 8 hours with a 4-person team at the Claude Builders Code Hackathon, and created pitch deck for final presentation

J.P Morgan Chase, Code For Good Hackathon | *Typescript, Next.js, MongoDB*

Oct. 2025 – Oct. 2025

- Partnered with NGO Team Impact to deliver a full-stack social media platform
- Designed and built backend API in Next.js, Typescript, and MongoDB, handling user auth, data storage, and data retrieval
- Delivered a functional MVP within 20 hours alongside 6 teammates and JPMC engineers, presenting directly to nonprofit stakeholders

BirdSense | *Python, PyTorch, Next.js, MongoDB, Lambda AWS, S3 buckets, TypeScript*

May 2025 – Aug. 2025

- Built a two-stage, real-time **CNN** pipeline deployed on a Raspberry Pi using YOLO for fast bird detection followed by a custom trained & optimized Swin-T vision transformer in PyTorch—**achieving 92% accuracy** in species classification
- Designed a scalable, serverless backend that employs a **REST API** with **AWS Lambda** (IAM-secured) to ingest bird detection events, upload cropped images to **Amazon S3** via pre-signed URLs, and store metadata in **MongoDB Atlas**
- Built a **Next.js/React** web application that presents cropped images alongside species name and confidence score; supports pagination and filtering via database querying

TECHNICAL SKILLS

Languages: Python, Java, OCaml C, SQL, TypeScript, HTML/CSS, Verilog

Frameworks: React, Next.js, Flask, PyTorch, Dask

Developer Tools: Git, Docker, AWS, VS Code, Visual Studio, PyCharm, IntelliJ, Linux

Libraries: Pandas, NumPy, Matplotlib, xarray, norfair, OpenCV, Ultralytics
